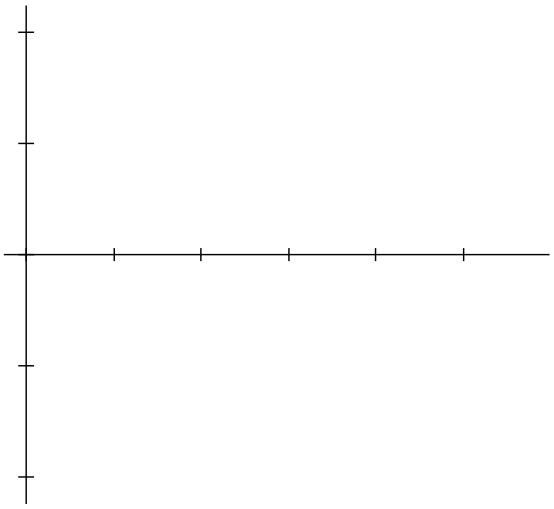
Quiz 5.1 to 5.3 Review

1. The table shows the velocity of a bicyclist riding for 60 seconds. Use right endpoint values (RRAM) to estimate the distance using 6 intervals of length 10. **(By hand, not using your program)**

Time (sec)	0	10	20	30	40	50	60
Velocity (ft/sec)	0	15	20	22	24	28	22

2. **Sketch the region R** enclosed between the graph of $y = -\frac{1}{4}x^2 + x + 1$ and the x-axis for $0 \le x \le 4$. Partition [0, 4] into 4 subintervals and **show the four rectangles** that MRAM uses to approximate the area of R.



3. Find MRAM for the region described in question 2. **(By hand, not using your program)**

4. Write the definite integral for $\lim_{\|P\|\to 0} \sum_{k=1}^{n} \left(c_k{}^2 + 8c_k\right)\Delta x$, where P is any partition of [1, 5]?

5. Use the graph of the integrand and areas to evaluate $\int_0^8 \sqrt{64 - x^2}\,dx$

6. Review Lesson 5.3 #1-6. Make sure you know the Rules for definite integrals (p.269).

7. Find the average value of the function $y = -3x^2 - 1$ on the interval [2, 4].

8. Use the graph of the integrand and areas to evaluate $\int_{2b}^{5b} x\,dx$

9. Evaluate $\int_0^{\frac{3\pi}{2}} 2\cos x\,dx$ by finding the antiderivative.
